Neurofibromatosis (NF) can cause tumors to grow on nerves throughout the body and may lead to deafness, blindness, learning disabilities, disfigurement, and cancer. It affects one in every 3,000 people, more than cystic fibrosis, Duchenne muscular dystrophy, and Huntington's disease combined. NF affects all populations equally, and there is not yet a cure.

The **Children's Tumor Foundation** Mission:

- Drive research toward treatments and a cure for NF
- Support people with NF and their families
- Foster the best clinical NF care
- Expand awareness and advance the fight against NF
